Submission Worksheet

Submission Data

Course: IT114-007-F2025
Assignment: IT114 Module 3 User Input Challenges
Student: Evans M. (ekn3)
Status: Submitted | **Worksheet Progress:** 100%
Potential Grade: 10.00/10.00 (100.00%)
Received Grade: 0.00/10.00 (0.00%)
Started: 10/13/2025 6:15:09 PM
Updated: 10/13/2025 9:22:27 PM

Instructions

- Overview Link: https://youtu.be/iowHMCKuj5o

1. Ensure you read all instructions and objectives before starting.
2. Create a new branch from `main` called `M3-Homework`
    1. `git checkout main` (ensure proper starting branch)
    2. `git pull origin main` (ensure history is up to date)
    3. `git checkout -b M3-Homework` (create and switch to branch)
3. Copy the template code from here: GitHub Repository - M3 Homework
    - It includes CommandLineCalculator, SlashCommandHandler, MadLibsGenerator, a BaseClass and a stories folder with 5 stories (used for MadLibsGenerator). Put all into an `M3` folder or similar (adjust `package` reference at the top if you chose a different folder name).
    - Immediately record to history
        - `git add .`
        - `git commit -m "adding M3 HW baseline files"`
        - `git push origin M3-Homework`
        - Create a Pull Request from `M3-Homework` to `main` and keep it open
4. Fill out the below worksheet
    - Each Problem requires the following as you work
        - Ensure there's a comment with your UCID, date, and brief summary of how the problem was solved
        - Update the `ucid` variable
        - Code solution (add/commit periodically as needed)
5. Once finished, click "Submit and Export"
6. Locally add the generated PDF to a folder of your choosing inside your repository folder and move it to Github
    1. `git add .`
    2. `git commit -m "adding PDF"`
    3. `git push origin M3-Homework`
    4. On Github merge the pull request from `M3-Homework` to `main`

7. Upload the same PDF to Canvas
8. Sync Local
    1. `git checkout main`
    2. `git pull origin main`

Section #1: (3 pts.) Challenge 1 - Command Line Calculator (Add/sub)

Progress: 100%

≔ Task #1 (3 pts.) - Edit the `main` method to solve the requirements

Progress: 100%

Details:

- Don't adjust the give code unless noted
- Challenge 1: Accept two numbers and an operator as command-line arguments (+ and -)
- Challenge 2: Allow integer and floating-point numbers
    - Ensure correct decimal places in output based on input (e.g., 0.1 + 0.2 → 1 decimal place)
- Display an error for invalid inputs or unsupported operators
- Add code to solve the problem (add/commit as needed)

Part 1:

Progress: 100%

Details:
Two screenshots are expected

1. Snippet of relevant code showing solution (with ucid/date comment)
2. Full output of executing the program (Capture 5 variations of tests)

```
        String num1 = args[0];
        String operator = args[1];
        String num2 = args[2];

        // Check the type of each number and choose appropriate parsing
        double num1 = Double.parseDouble(num1);
        double num2 = Double.parseDouble(num2);
        double results;

        // Check if operator is addition or subtraction
        if (operator.equals("+")){
            results = num1 + num2;
        }
        else if (operator.equals("-")){
            results = num1 - num2;
        }
        else{
            System.out.println("Use + or - only.");
            return;
        }
        // Part 2 second app - Documentation changes
        // Generate the equation result (Amortized). Ensure decimals display as the
        // highest decimal passed)
        // e.g., 0.1 + 0.2 would show as one decimal place (0.3). 0.11 + 0.2 would shows
        // as two (0.31). etc

        int decimals1 = num1.contains(".") ? num1.length() - num1.indexOf('.') - 1 : 0;
        int decimals2 = num2.contains(".") ? num2.length() - num2.indexOf('.') - 1 : 0;
        int maxDecimals = Math.max(decimals1, decimals2);

        String format = "%." + maxDecimals + "f";
        System.out.println("Results: " + String.format(format, results));
```

solution code

Part 2:

Progress: 100%

Details:
Direct link to the file in the homework related branch from Github (should end in `.java`)

URL #1
https://github.com/Faculty06/Ekn3-IT1[redacted]M3-Homework/M3/CommandLineCalculator.java

URL
https://github.com/Faculty06/Ekn

Saved: 10/13/2025 7:03:46 PM

Part 3:

Progress: 100%

Details:
Briefly explain `how` the code solves the challenge (note: this isn't the same as `what` the code does)

Your Response:

It accepts two strings and an operator, checks if its adding or subtracting using the if block, also check for it decimal places and solve while leaving the answer in the max decimal place using format.

Section #2: (3 pts.) Challenge 2 - Slash Command Handler

Progress: 100%

Task #1 (3 pts.) - Edit the `main` method to solve the requirements

Progress: 100%

Details:

- Don't adjust the give code unless noted
- Challenge 1: Accept user input as slash commands (Commands are case-insensitive)
  - `"/greet <name>" → Prints "Hello, <name>!"`
  - `"/roll <num>d<sides>" → Roll <num> dice with <sides> and returns a`
  - `"/echo <message>" → Prints the message back`
  - `"/quit" → Exits the program`
- Challenge 2: Print an error for unrecognized commands
- Challenge 3: Print errors for invalid command formats (when applicable)
- Add code to solve the problem (add/commit as needed)

Part 1:

Progress: 100%

Details:
Two screenshots are expected

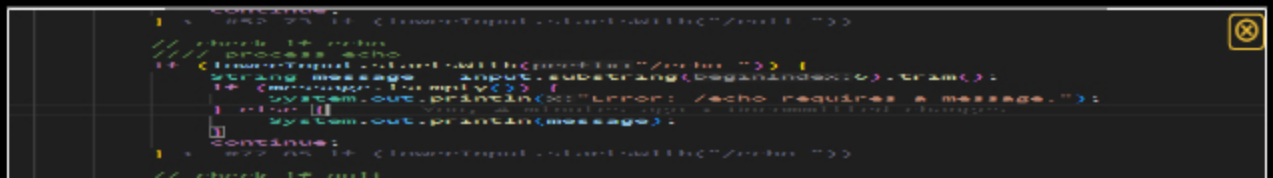

1. Snippet of relevant code showing solution (with ucid/date comment)
2. Full output of executing the program (Capture 3 variations of each command except "/quit")

Part 3:

Progress: 100%

Details:
Briefly explain `how` the code solves the challenges (note: this isn't the same as `what` the code does)

Your Response:

Takes a command, trims it, and ignore the case sensitivity, follows the command to either echo, greet or roll while aslo checking for invalid inputs.

Section #3: (3 pts.) Challenge 3 - Mad Libs Generator

Progress: 100%

☰ Task #1 (3 pts.) - Edit the `main` method to solve the challenges

Progress: 100%

Details:

- Don't adjust the give code unless noted
- Ensure you have the `stories` folder with the 5 stories
- Challenge 1: Load a **random** story from the "stories" folder
- Challenge 2: Extract **each line** into a collection (i.e., ArrayList)
- Challenge 3: Prompts user for each placeholder (i.e., `<adjective>`)
  - Any word the user types is acceptable, no need to verify if it matches the placeholder type
  - Any placeholder with underscores should display with spaces instead
- Challenge 4: Replace placeholders with user input (assign back to original slot in collection)
- Add code to solve the problem (add/commit as needed)

🖼 Part 1:

Progress: 100%

Details:
Two screenshots are expected

1. Snippet of relevant code showing solution (with ucid/date comment)
2. Full output of executing the program (Capture the process for at least 2 stories)

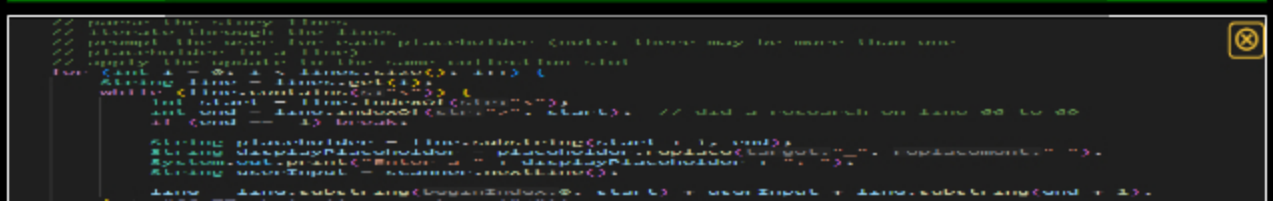

```
// Start edits
// ckns 09 13 2025

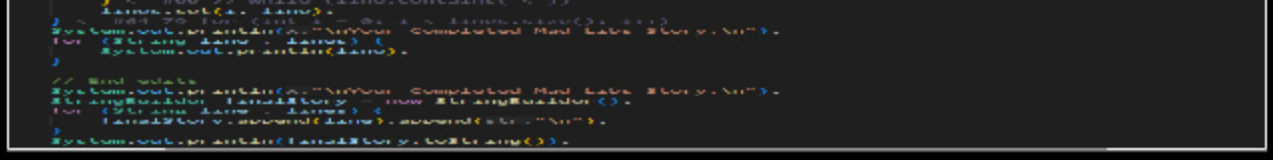

// load a random story file
File[] storyFiles = folder.listFiles();
File story = storyFiles[new Random().nextInt(storyFiles.length)];

List<String> lines = new ArrayList<>();

try (Scanner fileScanner = new Scanner(story)) {
    while (fileScanner.hasNextLine()) {
        lines.add(fileScanner.nextLine());
    }
} catch (FileNotFoundException e) {
    System.out.println("Error reading the story file.");
    scanner.close();
    return;
}
```

Part 3:

Progress: 100%

Details:
Briefly explain `how` the code solves the challenges (note: this isn't the same as `what` the code does)

Your Response:

It randomly selects a file from the story folder, scans for placeholder tags and ask the user for input then save the updates and print it out.

Task #2 (0.33 pts.) - WakaTime - Activity

Progress: 100%

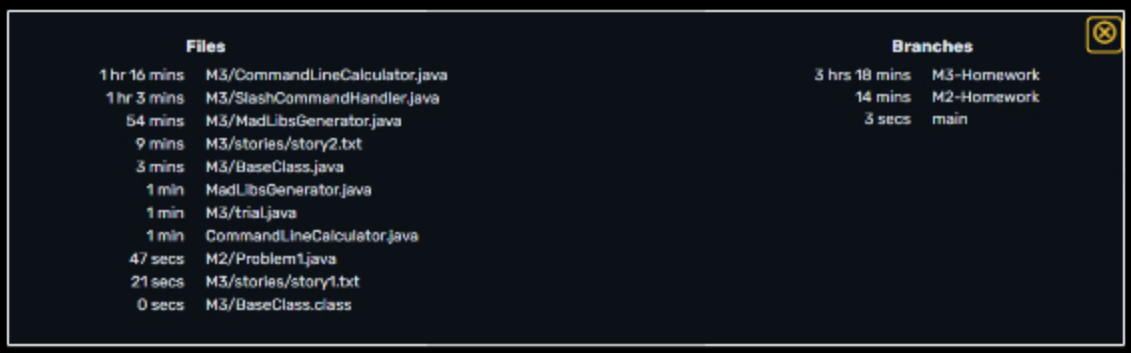

Details:

- Visit the WakaTime.com Dashboard
- Click `Projects` and find your repository
- Capture the overall time at the top that includes the repository name

- Capture the individual time at the bottom that includes the file time
- Note: The duration isn't relevant for the grade and the visual graphs aren't necessary

waka time

Waka Time

Saved: 10/13/2025 9:15:28 PM

Task #3 (0.33 pts.) - Reflection

Progress: 100%

Task #1 (0.33 pts.) - What did you learn?

Progress: 100%

Details:
Briefly answer the question (at least a few decent sentences)

Your Response:

I learned about about how substrings works and how to use them

Saved: 10/13/2025 9:17:39 PM

Task #2 (0.33 pts.) - What was the easiest part of the

assignment?

Progress: 100%

Details:
Briefly answer the question (at least a few decent sentences)

Your Response:

Slash command handler. It was fun to play with lol

Saved: 10/13/2025 9:19:52 PM

Task #3 (0.33 pts.) - What was the hardest part of the assignment?

Progress: 100%

Details:
Briefly answer the question (at least a few decent sentences)

Your Response:

Mad libs Handler. Wasnt that bad but took me so long figure out the errors

Saved: 10/13/2025 9:22:27 PM
